EDUCATION

Govt. Engineering College Barmer

Bachelor of Technology in Computer Science Engineering (AI & ML)

Barmer, RJ

Sep. 2020 – June 2024

TECHNICAL SKILLS

Languages: Python (Advanced), SQL (PostgreSQL), JavaScript, HTML/CSS

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Excel (Basics)

Data Analytics: Data Cleaning, Statistical Aggregation, EDA

Tools: VS Code, Git/GitHub, MS Excel (Pivots, VLOOKUP)

EXPERIENCE

Android Development Intern

1Stop.ai

Aug. 2023 – Sep. 2023

Remote

- Explored Android application lifecycles and components to build basic interactive mobile modules.
- Collaborated with team members to document application flows and UI requirements.

Web Developer Intern

Ingenious Tech Key

June 2023 – July 2023

Remote

- Developed responsive frontend components using HTML, CSS, and JavaScript, improving UI consistency.
- Optimized code structure for better loading times and cross-browser compatibility.

PROJECTS

Zepto Warehouse & Inventory Intelligence | SQL, PostgreSQL

Nov. 2025

- Engineered a database schema to track stock, prices, and available quantities for an e-commerce warehouse.
- Wrote complex **Scalar Subqueries** to calculate the percentage contribution of each category to the total warehouse value, aiding in stock prioritization.
- Implemented **CASE statements** to classify products into High, Medium, and Bulk weight categories for logistics optimization.

IPL 2022 Strategic Insights Analysis | Python, Pandas, Seaborn

Dec. 2025

- Conducted EDA on IPL 2022 dataset to derive team performance metrics and winning trends.
- Discovered a significant correlation between venue and match results, identifying specific stadiums where **"Chasing Difficulty"** was highest based on average 2nd innings scores.
- Cleaned and aligned disparate data points using Pandas **GroupBy and Merge** operations to handle 100% of team-wise aggregation.

NYC Taxi Business Analytics | Python, NumPy, Pandas

Dec. 2025

- Analyzed large-scale NYC taxi trip data to calculate operational metrics like average speed and tip ratios.
- Identified that **31% of rides resulted in zero tips**, providing a data-backed starting point for service quality improvement strategies.
- Applied **Boolean Indexing and Masking** to filter high-speed outliers and analyze weekend demand peaks.

HONORS & AWARDS

- Finalist, Smart India Hackathon (SIH) 2022:** Selected among top teams nationally to solve real-world governmental problems at the Grand Finale.
- Technical Coordinator, INFINITO 2023:** Led the technical team for the college sports event, managing cross-functional coordination and event logistics.
